

Annex IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco SDG Credit Income

Legal entity identifier: 213800T791C07EB3NL58

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ Yes

☒ No

☐ It made sustainable investments with an environmental objective: ____%

☒ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 72.0% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It made sustainable investments with a social objective: ____%

☐ It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promotes the following Environmental and Social characteristics:

1. The sub-fund was solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. For its allocation to Emerging Markets sovereign bonds: The sub-fund was solely invested in countries that hold a positive or neutral SDG score.
3. The sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
4. The sub-fund avoided investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breached the international norms were excluded from the investment universe.
5. The sub-fund invested a minimum of 5% in green, social, sustainable, and/or sustainability-linked bonds.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the sub-fund.

Sustainability disclosures (Unaudited)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● *How did the sustainability indicators perform?*

The sustainability indicators used to measure the attainment of each of the environmental or social characteristics promoted by this financial product performed as follows. All values are based on average positions and latest available data as at 2024-12-31.

1. 93.47% of the investments in portfolio held a neutral or positive SDG score based on the internally developed SDG framework.
2. For its allocation to Emerging Markets sovereign bonds: 0.00% was invested in countries that hold a positive or neutral SDG score.
3. The portfolio contained on average 0.00% investments that are on the Exclusion list as result of the application of the applicable exclusion policy. Unless sanctions stipulate specific timelines, exclusions apply within three months after the announcement. If selling is not possible for liquidity reasons, then buying is not allowed. Once selling is possible at a reasonable price, holdings will be sold.
4. 0.00% of the companies in portfolio are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The sub-fund invested 18.21% of its assets in green, social, sustainable and/or sustainability-linked bonds.

● *...and compared to previous periods?*

Sustainability indicator	2024	2023	2022
Investments in green, social, sustainable and/or sustainability-linked bonds	18.21%	11.44%	6.80%
Holdings with a neutral or positive SDG score	93.47%	105.89%	90.74%
Investments in Emerging Markets sovereign bonds with a neutral or positive SDG rating	0.00%		
Companies in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises	0.00%	0.00%	0.00%
Investments on exclusion list	0.00%	1.45%	0.49%

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

Robeco uses its proprietary SDG framework to determine if an investment qualifies as sustainable investment. Robeco's SDG Framework is a tool that systematically assesses individual companies on key SDG targets and sector-specific indicators which help analysts determine a company's SDG contributions. These contributions aggregate into an overall SDG company score. The resulting scores are used to help construct portfolios that pursue positive impact, avoid negative impact, and support sustainable progress in the economy, society and the natural environment. Positive scores imply that the investment do not significant harm any of the UN Sustainable Development goals.

The sustainable investments contributed to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Alignment with the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact (PAI) are considered in the calculation of SDG scores under Robeco's proprietary SDG Framework. Violations with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights and Principal Adverse Impact lead to a negative SDG score. Only investments with a positive SDG score can be classified as sustainable investment, indicating that such investments did no significant harm to any environmental or social sustainable investment objective. Minus scores show harm. Scores of -2 of -3 may even cause significant harm.

Sustainability disclosures (Unaudited)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

Robeco's SDG Framework assesses the contribution of companies and countries to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

The following PAIs were considered in the fund:

PAI 1, table 1 was considered for scope 1, 2 and 3 (upstream) Green House Gas emissions via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 2, table 1 was considered for the carbon footprint via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 3, table 1 was considered for the Green House Gas intensity of investee companies via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 4, table 1 regarding the exposure to companies in the fossil fuel sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal ($\geq 20\%$ of the revenues), oil sands ($\geq 10\%$ of the revenues) and arctic drilling ($\geq 5\%$ of the revenues)).

PAI 5, table 1 regarding the share of energy consumption from non-renewable sources was considered via engagement and exclusions. Robeco is committed to contribute to the goals of the Paris Agreement and to achieving net zero carbon emissions by 2050. The portfolio decarbonization targets are derived from the P2 pathway from the IPCC 1.5-degree scenario of 2018. The P2 pathway is composed of the following emission milestones: 49% reduction of GHG emissions in 2030 and -89% reduction of GHG emissions in 2050, both relative to 2010 baseline.

PAI 6, table 1 regarding Energy consumption per High Impact Climate sector was considered via engagement and exclusions. Robeco's Exclusion policy covers the exclusion of activities with highly negative climate impacts (e.g. thermal coal (Coal power expansion plans ≥ 300 MW)).

PAI 7, table 1 regarding activities negatively affecting biodiversity sensitive areas was considered via engagement. Robeco is developing methods to evaluate the materiality of biodiversity for our portfolios, and the impact of our portfolios on biodiversity. Based on such methods Robeco will set quantified targets in order to combat biodiversity loss, latest by 2024.

For relevant sectors, biodiversity impact is considered in fundamental SI research analysis. Robeco is developing a framework to consider this across all investments.

Robeco's Exclusion policy covers the exclusion of palm oil producers in which a minimum percentage of RSPO certified hectares of land at plantations as detailed in Robeco's exclusion policy.

PAI 8, table 1 regarding Water emissions was considered via engagement. Within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to water. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 9, table 1 regarding hazardous waste and radioactive waste ratio was considered via engagement. In addition, within Robeco's Controversial Behaviour program, companies are screened on a potential violation in relation to waste. When Robeco deems a company to cause significant negative impact on local water supply or waste issues which is a breach of UN Global Compact principle 7, it will either apply enhanced engagement or directly exclude the company from the universe.

PAI 10, table 1 regarding violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises was considered via engagement and exclusions. Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, and is guided by these international standards to assess the behaviour of companies. In order to mitigate severe breaches, an enhanced engagement process is applied where Robeco deems a severe breach of these principles and guidelines has occurred. If this enhanced engagement, which may last up to a period of three years, does not lead to the desired change, Robeco will exclude a company from its investment universe.

PAI 14, table 1 regarding exposure to controversial weapons was considered via exclusions. For all strategies Robeco deems anti-personnel mines, cluster munitions, chemical, biological weapons, white phosphorus, depleted uranium weapons and nuclear weapons that are tailor made and essential, to be controversial weapons. Exclusion is applied to companies that are manufacturers of certain products that do not comply with the following treaties or legal bans on controversial weapons: 1. The Ottawa Treaty (1997) which prohibits the use, stockpiling, production and transfer of anti-personnel mines. 2. The Convention on Cluster Munitions (2008) which prohibits the use, stockpiling, production and transfer of cluster munitions. 3. The Chemical Weapons Convention (1997) which prohibits the use, stockpiling, production and transfer of chemical weapons. 4. Biological Weapons Convention (1975) which prohibits

Sustainability disclosures (Unaudited)

the use, stockpiling, production and transfer of biological weapons. 5. The Treaty on the Non-Proliferation of Nuclear Weapons (1968) which limits the spread of nuclear weapons to the group of so-called Nuclear Weapons States (USA, Russia, UK, France and China). 6. The Dutch act on Financial Supervision 'Besluit marktmisbruik' art. 21 a. 7. The Belgian Loi Mahoux, the ban on uranium weapons. 8. Council Regulation (EU) 2018/1542 of 15 October 2018 concerning restrictive measures against the proliferation and use of chemical weapons.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors were considered:

- Pre-investment, Robeco's SDG Framework assesses companies' and countries' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies and countries on many of the topics considered by the PAI indicators. The average SDG score of the portfolio was 1.1872.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via Robeco's entity engagement program, the following PAIs were considered:

- The greenhouse gas emissions (PAI 1, table 1) of the portfolio were 792,116 tons.
- The carbon footprint of the portfolio (PAI 2, table 1) was 683 tons per EUR million EVIC, compared to 875 tons per EUR million EVIC for the benchmark.
- The green house gas intensity of the portfolio (PAI 3, table 1) was 1,371 tons per EUR million revenue, compared to 1,528 tons per EUR million revenue for the benchmark.
- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1) was 3.10% of the net assets, compared to 9.65% of the benchmark.
- The share of non-renewable energy consumption of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources was 54.95% of the net assets, compared to 70.36% of the benchmark.
- The share of non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources (PAI 5, Table 1), expressed as a percentage of total energy sources for the funds was 36.82% of the net assets, compared to 60.75% of the benchmark.
- The energy consumption per million EUR of revenue of investee companies, per high-impact climate sector (PAI 6, Table 1) was 2.06 GWh, compared to 2.09 GWh for the benchmark.
- The share of investments in investee companies with sites/operations located in or near biodiversity sensitive areas where activities of those investee companies negatively affect those areas (PAI 7, Table 1) was 2.30% of the net

Sustainability disclosures (Unaudited)

assets, compared to 6.72% of the benchmark.

- The emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (PAI 8, Table 1) were 0.03 tons, compared to 0.06 tons of the benchmark.
- The generation of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average were 323.22 tons, compared to 73.32 tons of the benchmark.
- Exposure to companies in violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1) was 0.00% of the net assets, compared to 1.01% of the benchmark.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 through 31 December 2024

Largest Investments	Sector	% Assets	Country
0.000 TREASURY BILL 28-JAN-2025	TREASURIES	4.49%	United States
0.000 TREASURY BILL 04-FEB-2025	TREASURIES	1.59%	United States
0.500 BUNDESREPUB. DEUTSCHLAND 15-FEB-2025	TREASURIES	1.41%	Germany

4.750 CROWN EURO HOLDINGS SA 15-MAR-2029	CAPITAL_GOODS	0.73%	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

Sustainability disclosures (Unaudited)

The category #1 Aligned with E/S characteristics covers:

- The sub-category #1A Sustainable covers environmentally and socially sustainable investments.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Average exposure in % over the reporting period
Sectors deriving revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels -	
NATURAL_GAS	3.83%
ENERGY	0.59%
Other sectors	
BANKING	30.78%
TREASURIES	8.26%
CONSUMER_CYCLICAL	7.16%
BASIC_INDUSTRY	7.04%
INSURANCE	6.86%
COMMUNICATIONS	5.50%
OWNED_NO_GUARANTEE	4.81%
ELECTRIC	4.29%
CAPITAL_GOODS	3.85%
CLO	2.97%
TECHNOLOGY	2.69%
CONSUMER_NON_CYCLICAL	2.51%
TRANSPORTATION	1.68%
CAR_LOAN	0.91%
FINANCE_COMPANIES	0.78%
SOVEREIGN	0.55%
MORTGAGE_ASSETS	0.48%
FINANCIAL_OTHER	0.43%
BROKERAGE_ASSETMANAGERS_EXCHANGES	0.34%
Cash and other instruments	3.70%

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0.0%.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Sustainability disclosures (Unaudited)

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (Capex)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (Opex)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

0.0%.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage Taxonomy Alignment in portfolio did not change during the reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

17.4%. This concerns investments with a positive score on one of more of the following SDG's, without harming other SDG's: SDG 12 (responsible consumption and production), 13 (climate action), 14 (life below water) or 15 (life on land).

What was the share of socially sustainable investments?

54.6%. This concerns investments with a positive score on one of more of the following SDGs, without harming other SDGs: SDG 1 (No poverty), 2 (zero hunger), 3 (good health and well-being), 4 (quality education), 5 (gender equality), 6 (clean water and sanitation), 7 (affordable and clean energy), 8 (decent work and economic growth), 9 (industry, innovation and infrastructure), 10 (reduced inequalities), 11 (sustainable cities and communities), 16 (peace justice and strong institutions) or 17 (partnerships for the goals).

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The use of cash, cash equivalents and derivatives is included under "not sustainable". The sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Any derivatives in the sub-fund were not used to attain environmental or social characteristics promoted by the financial product.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reporting period, the overall sustainability profile of the Sub-fund was improved further by focusing on material information with regards to Environmental, Social and Governance factors. Furthermore, 8 holdings were under active engagement either within Robeco's thematic engagement programs or under more company-specific engagement topics related to Environmental, Social and/or Governance issues. In addition, the Sub-fund invested 16.68% in green, social, sustainable and/or sustainability linked bonds.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
